

- **TIME SAVING & REVENUE GENERATION**

According to a survey published by the *American Journal of Health-System Pharmacy*, the number of pharmacists available per 100 hospital beds ranges from 6 to 14 pharmacists. With a schedule that busy, a pharmacist may not be able to provide each patient with a balanced amount of time to educate on medication management or to even determine if a patient meets MTM eligibility requirements. Our MTM system automates the process of medication management to elevate the quality of care to the patient

- **LIFE SAVING**

Providing MTM services to patients is proven to reduce the number of readmissions to hospitals due to medication conflicts, noncompliance with discharge instructions, or life-threatening reactions caused by medication complications. The EagleForce MTM system provides the most comprehensive picture of a patient's medication history in real-time across several healthcare databases

- **COST SAVING**

Penalties for patient re-admission rates result in added cost across the care continuum that may better serve in offsetting costs of care for underinsured or uninsured patients or even investing in new, innovative technologies to improve patient care. The EagleForce solution helps to streamline the MTM process by automatically identifying eligible patients, centralizing medication information, and automating the billing process allowing providers to spend less time with paperwork and more time providing exceptional patient care

Medication Therapy Management (MTM)

Real-Time Medication Management

Medication Therapy Management (MTM) is a service that saves lives and is designed to optimize the medication regimen for patients with at least two-three chronic diseases, taking multiple prescription medications (between two and eight), that are likely to incur \$4,696 for covered drugs. EagleForce Health's Artificial Intelligence now makes it easier for healthcare providers to identify, schedule, co-manage, and process claims for qualified MTM patients based on their insurance.

There are over 10,000 medications on the market today which qualify for MTM review. Each person processes medications differently due to differences in personal metabolism, physical activity, genetic makeup and other factors thus amplifying the need for direct pharmacist interaction. By giving providers the ability to monitor and alert on patient medications, allergies and supplements the EagleForce MTM solution enhances patient efficacy while providing the ability to schedule patients for specifically allocated billings within the MTM adjudication system. Medication information and dangerous drug and supplement conflicts are presented within workflow and made available on a dynamic nature. MTM session tracking, medication planning, provision of educational information and MTM billing are executed within a single key stroke following the completion of the service.

Ensuring patient understanding of a prescription medication plan increases the likelihood of a successful outcome. Enrollment in *EagleForce Health's MTM-Patient Engagement Environment* allows patient the best opportunity to maintain a prescription drug plan long after the MTM consultation session while creating a persistent revenue stream often missed by retail pharmacist.

ABOUT US

EagleForce Health's pedigree was established within the Intelligence, Defense and Homeland Security sectors and is recognized as a leading technology solution's company providing a broad range of eligibility systems development, organizational and operational assistance to "Big Data" processing including interoperability, predictive analytics, and IT functions. Our evidence-based eligibility & real-time monitoring systems have been deployed to solve some of the biggest technology challenges in the world including direct support to pharmaceutical manufacturers and pharmacies specific to the Federal Anti-Kickback Statute.
