

MEDICATION THERAPY MANAGEMENT (MTM)

Medication Therapy Management (MTM) is designed to optimize medication regimen for patients with two to three chronic conditions who are taking multiple prescription medications (typically between two and eight) and are likely to incur high annual drug costs that exceed a cost threshold set by CMS each year (Ex: \$1,276 for 2026).

EagleForce Health's artificial intelligence makes it easier for providers to identify, schedule, co-manage, and process billing claims for qualified MTM patients.

Using AI-powered technology, EagleForce Health simplifies the identification of eligible patients, supports medication management, and streamlines care delivery in real time.
